

## Software Engineer (m/f) - Java / Web

Wanted immediately - full-time position based in Berlin.

*Be part of Healthcare's digital future.*

With our growing team we aim at providing new solutions for people in digital health. Therefore, we need a senior level software engineer to join our interdisciplinary team of software engineers, digital natives and health experts.

You will help us work on cutting-edge and innovative digital health projects and learn by contributing features as a member of an experienced team.

You can expect latest technologies, an agile working environment in a self-organized team and flexibility in organizing your work.

Healthcubator is Germany's first incubator and accelerator in the healthcare ecosystem. Our partners are providers like hospitals and outpatient-clinics, payors like sickness funds and private insurance companies, medical devices companies, IT and telecom, regulatory bodies and politics.

### Your role and key responsibilities

- Create outstanding solutions which help people in their digital everyday health
- Work closely with the software engineers, product owners, and other stakeholders developing software for business problems to build production-ready solutions
- You are responsible for the entire development stack from server provisioning, data modelling to coding and testing up to understanding what customers and businesses need
- Actively seek opportunities to improve technical processes and present them to the team
- Respects refactoring of code as well as deferring technical debt when and where applicable
- Demonstrate a pragmatic approach to building technical solutions
- Communicate technical concepts with trade-offs, risks, and benefits
- Design, develop, test, deploy, maintain and improve software and processes
- Write high quality, high-performing and well-tested code
- Turn design requirements and prototypes into working applications
- Design for and deploy to on premise infrastructure
- Analyze and improve efficiency, stability, scalability and security
- Collaborate with your team in a friendly, open, and agile environment

### Your profile - the must haves

- Degree in computer science or a related technical discipline (like business computing, computer science and media...), ideally with a major in software development

- Strong production experience of current Java technologies, especially Java7/8 including Frameworks like Spring MVC
- Several years' experience of intensive programming in an object-oriented language (Solid object oriented skills)
- Working knowledge of modern web technologies such as HTML5, CSS3 and JavaScript
- Mastery of relational databases and SQL
- Ability to manage git repositories and workflows, including branching and releasing
- Open, optimistic and friendly mindset with a deeply rooted passion for technology and great communication skills - you are driven by innovation
- Comfortable in an international work environment
- You love feedback
- You can always imagine better things - you like to learn and improve your skills every day
- Business fluent or native German is a prerequisite, fluent English is a plus

## Your profile - the great to haves

- Experience setting-up and working with build management, continuous integration tools and test automation systems, e.g. Maven, TeamCity, Jenkins, Docker or similar

## What we offer

- The chance to shape the digital future of the health industry with passion and creativity
- You'll be an important part of our team and involved in varied projects that make up daily software engineering in a modern IT startup
- Exciting insights into healthcare system technology in the digital healthcare sector and beyond
- Attractive remuneration and well-equipped working place in a modern office in the heart of Berlin Mitte
- A collaborative, open-minded team with fantastic colleagues and a continuous exchange that will support you in your professional development
- Mobile Working: work from anywhere you want to work at
- Visa and relocation assistance
