

Working Student - Software Development (m/f)

Wanted immediately.

Be part of Healthcare's digital future.

With our growing team we aim at providing new solutions for people in digital health. Therefore, we need a software development working student to join our interdisciplinary team of software engineers, digital natives and health experts for 8-10 hours/week or more.

You will help us work on cutting-edge and innovative digital health projects and learn by contributing features as a member of an experienced team.

You can expect latest technologies, an agile work environment in a self-organized team and flexibility in organizing your work.

Healthcubator is Germany's first incubator and accelerator in the healthcare ecosystem. Our partners are providers like hospitals and outpatient-clinics, payors like sickness funds and private insurance companies, medical devices companies, IT and telecom, regulatory bodies and politics.

Your tasks

- Create outstanding applications that help people in their digital everyday health
- Collaborate with your team in a friendly, open, and agile environment
- Actively work with software engineers, product owners, marketing people and other stakeholders developing superb solutions.

Your profile -the must haves

- You are enrolled in a (partly-) technical course of studies (like computer science) or a related technical discipline (like business computing, computer science and media...)
- Open, optimistic and friendly mindset with a deeply rooted passion for technology - you are driven by innovation
- Knowledge of modern web technologies such as HTML5, CSS3 and JavaScript
- Ideally you have some experience with and knowledge of the Java language and/or other JVM languages
- You love feedback and see it as a growth opportunity
- You can always imagine better things - you like to learn and improve your skills every day
- Business fluent or native German is a prerequisite, fluent English is a plus

Your profile - the nice to haves

- Experience setting-up and working with build management, continuous integration tools and test automation systems, e.g. Maven, TeamCity, Jenkins, Docker or similar

What we offer

- You'll be an important and fully integrated part of our team involved in a varied range of tasks that make up daily software engineering in a modern IT startup
- You'll gain expertise and broaden your technical know-how about current web technology trends
- Exciting insights into healthcare system technology in the digital healthcare sector and beyond
- More than just a job in the heart of Berlin Mitte

Interested in this fantastic opportunity to gain work experience in an exciting industry? Please email us your CV plus a few words about your motivation and experience and earliest start date: jobs@healthcubator.com. We look forward to meeting you!
